ARMAND DE MESTRAL • V

The basic standards set ut in BITs have remained relatively on nstant since 1959. They include, principally, the standards of most-favoured nation (MFN) and national treatment (NT), a guarantee of fair and equitable treatment (FET) and then also full protection and security. They also include a pm hibition against certain forms of performance requirements binding the foreign investor to perform speci cobligations as a condition precedent to allowing the investment. Finally, virtually all BITs repeat the public international law prohibition against expropriation of for reign-owned assets unless for a public purpose and accompanied by prompt and effective compensation. These key protections are included in most BITs, but they may be worded in different ways and there is no uniform for mat for all BITs. Other protections, such as the determination of whether the standards are applied only after the investment is all weder whether it applies also the pre-investment phase, may be added aco rding to the policies of the negotiators. What has changed over time is the length and o mplexity of the BITs. The early so-called sold standard BITs on ncluded by European solvernments are seld m me re than 10 pages in length and are limited to setting out basic general principles. Me re recently, for a variety. f reas, ns that will be discussed below, model BITs have been me much more extensive, as far as their substantive and pn cedural pn visions are on neerned, and seto ut the principles in much greater detail. They also tend to set out a wide range of exceptions, interpretations and detailed provisions designed **b** protect the exercise of authority by **o** ntracting **g** vernments, with the aim of protecting public palicies regulating a mmercial transactions, a nsumer protection, environmental and health standards and the pretection of human rights.12

This new appn ach be drafting has been particularly evident in the onntext of RTAs subsequent be the onclusion of NAFTA in 1994, and has characterized virtually all RTAs with investment chapters on neluded in recent years by the European Union, Canada, the United States and Japan. But the new appn ach has by no means been restricted to RTAs and has one to characterize many recently on neluded BITs of Canada, the United States and Japan, and has clearly been adopted by the European Union since it acquired on mpetence of vertical direct investment matters in 2009. The me states have adopted more radical appn aches. Recently, South Africa suggested it would withdraw from many BITs, while Indonesia and India have issued new model BITs for the future and UNCTAD

It is noteworthy, however, that the prohibition of performance requirements, which can be described as an innovation of the *North American Free Trade Agreement* (PCHVC), ku gpeqwpygtgf nguu qhygp kp kpxguv o gpv c i tgg o gpvu vj cp vjg qvjgt vtcfkvkqpcn uvcpfctfu qh rtqvgevkqp.

rep. rts that no less than 45 states are reviewing their BITs. Venezuela, Be livia and Ecuado r have taken the step of withdrawing from the ICSID Go nvention. 20

BITs were originally designed to deal with capital transfers between capital-exp. rting (usually First World) and capital-imp. rting (usually Developing World) or untries. In me 1,200 BITs exist between European and developing or untries. But to day the majority of BITs are or ncluded on a South-South basis. Until the fall of the Berlin Wall, it was also or mmon for many Western or untries to or nclude BITs with states in the Gommunist Blocc. Very few BITs were or ncluded between developed democracies. One early exception was the Freedom, Gommerce and Navigation agreement (known as the FCN) between the United States and Italy, which became the object of the Early South of the International Gourto of Justice (ICJ). When Canada and the United States or ncluded an important trade agreement in 1988, it included a groundbreaking investment chapter, but no ISA. However, when Canada, the United States and Mexiconego tiated an even more in uential trade agreement (NAFTA) in 1994, Part Bof Chapter 11 dealing with investments was devoted to ISA in order to deal with problems perceived to exist in Mexicon. There is reason to believe that NAFTA began the processor of including ISA in the investment chapters of RTAs, which is currently playing itself out with the ornclusion of megaregional RTAs involving developed democracies as well as a variety of their or untries.

The Eun pean Union on nstitutes a particularly interesting and on mplex case, in that it is made up of many of the or untries that originated the practice of or ncluding BITs, such as Germany, France, the Netherlands and the United Kingdom. In 2009, the member states of the Eun pean Union book the important step of transferring or mpetence over for reign direct investment to the Eun pean Union. This is part of the Common Commercial Policy and is thus, in principle, an exclusive or mpetence of the Eun pean Union, although some doubts remain as to the precise ambit of the or mpetence, and the Court of Justice of the Eun pean Union (CJEU) has yet to rule on the issue. EU member states have signed some 1,200 BITs with other states and, as a result of the adhesion of the 12 central Eun pean states in 2004 and 2006, there are now some 190 BITs between EU member states themselves.

The transfero for mpetence be the Eun pean Union has had the result of for roing the member states and the original part a new, specifically EU approach be negotiating BITs and investment chapters in RTAs. Some states and observers were of the view that the Eun pean Union should orntinue be negotiated in the basis of the traditional gold standard model of the member states; however, a lively debate quickly are sein the EU Parliament as to the apprehended dangers of the traditional approach

and many parliamentarians, inspired by the experience of Canada, the United States and Mexico under NAFTA Chapter 11,³¹ argued for a new apply ach designed to project the capacity of member states and the European Union to adopt regulatory measures to project on nsumers, the environment, public health and human rights without fear of contestation by for reign investors under ISA. So me parliamentarians and go vernmental ministers in Germany and France³² have even called for the abandonment of ISA in BITs. As a result of these debates, the commission has adopted an apply ach based on public policy projection and broad exceptions in its arst trade and investment negotiations with Canada³³ and Singapore, and is apparently taking the same apply ach with India and the United States. This latter negotiation has elicited a particularly strident debate over ISA, with many calling for the abandonment of recourse to ISA in the future TTIP.³⁵

The recent debate in the European Union and some of its member states seems to reject the fact that an increasing number of BITs and RTA investment chapters are being so included between developed democracies and, as a direct result, the governments of these democracies have been placed in the unsumfactable and unexpected position of being sued by foreign investors. During the early years, when Germany, France, the United Kingdom, the Netherlands and others were so including BITs with developing so untries, or even during the 1990s, when UNCTAD was ensuraging developing so untries to sign BITs with capital-exporting so untries as part of the Washington Consensus approach international development, there was little, if any, so into versy, and certainly not in developed democracies. The BITs were adopted in the developed would virtually without so imment and no question was raised publicly or in national parliaments so incerning the propriety of ISA as a means of guaranteeing respect for investment treaty so mmitments.

The rst signi cant change in this pattern courred in 1994 with the entry into a rce of NAFTA, a treaty binding two developed democracies with a third party that was a developing democracy. The American and Canadian negotiators apparently a nsidered it necessary to include ISA in NAFTA

Until the mid-parto f the twentieth century, judges in a numbero f o untries, including Canada, showed on insiderable hesitation in allowing and enforcing judgments by arbitrators. But as a resulton flegislative intervention and a change of approach, judges in Canada and most democratic of untries accept and enforce arbitral decisions without question as to their legitimacy. Arbitration and other forms of alternative dispute resolution have been me a valuable, and in some cases obligatory, alternative to require to the coordinate of the coordinat

One can argue that ISA is a special case in that it involves a unique mix of private and public interests. This is a central issue. As recently as 2005, judges of the superior of urts of Korea expressed serious reservations as to the legitimacy of ISA. But after a period of study they appear to have withdrawn their reservations. Senior members of the legal of mmunity in Australia and New Zealand, among of thers, expressed similar of neems in a petition in 2012. The current Australian government does not appear to share all these reservations and has recently of neluded a trade agreement that includes ISA provisions. The current appear to the same all these reservations and has recently of neluded a trade agreement that includes ISA provisions. The current appears to the same all these reservations and has recently of neluded a trade agreement that includes ISA provisions.

Arguably, the mere fact of mixing public and private interests in an arbitration does not necessarily make the process illegitimate. Recent decisions by the Supreme Gourt of the United States have held that of mpetition law issues may legally be subjected to arbitration between private parties. The CJEU appears to hold a similar view, as does the Supreme Gourt of Canada. There does appear to be a developing policy allowing the arbitration of an increasing range of public issues in litigation between private parties. This certainly remains a sensitive issue and some critics of ISA suggest that it consess the line. But if one of nsiders these arguments in light of the ever-expanding to leaf arbitration in a great many forms of litigation, these arguments of principle against arbitration are now unlikely to prevail.

ISA is cond cted in secret and ISA proced res are generall non-transparent

Arbitration involves the choice of privately selected judges who are authorized to render a legally binding decision. Once invoked, the choice of arbitration is irrevocable. Commercial arbitration almost always takes place in a private and con dential environment. This is thought to be one of the advantages of arbitration, together with ef cacy, speed, lower costs and the right to choose the procedure and applicable law. When ISA was rst established, it was assumed that the proceedings would be private and con dential and that the award need not be made public, absent agreement among the parties. Some arbitral administering organizations such as the London Court of International Arbitration (LCIA),85 which as of today does not administer ISAs, and the International Chamber of Commerce (ICC),86 which has administered a relatively small number

to require greater transparency. ⁸⁹ Thus, many investor-state proceedings continue to be conducted in private, at the behest of the parties.				
Many firms of a mmercial arbitration are indeed a nducted in secret and the decisions remain a n dential, although they normally have to be made public if a party go es to a curt to seek enforcement. It is of the nature of a mmercial arbitration that parties should have the exibility to chitrc thee				

chosen from a very small and unrepresentative group who have expertise in law, but no expertise in the broader social, economic or environmental issues of public policy that are often posed in ISA. Particularly disquieting to many is the fact that some, but by no means all, arbitrators also serve as counsel in other cases and may thus be perceived to have a personal interest in accepting or promoting certain arguments over others. In short, there is a perception of systemic or personal bias. More broadly, there is a concern that arbitrators are unprepared or even personally unwilling to deal with the broad policy issues that may be posed in ISA cases and there is a strong feeling that the paradigm of international commercial arbitration is unsuitable for ISA cases that pose public policy

the national treatment and MFN standards are limited so as to protect the right of states to protect public health, the environment, etc.; and clearer and broader exceptions clauses are written in to protect the right of states to adopt

regulat ry standards f vari us kinds.

ARMAND DE MESTRAL • 13

panel of arbitrators appointed by ICSID member states. It was poop as decide to change this rather limited and blunt poor cedure into a genuine appeals poor cess for the entire ICSID Go ovention. This would have on vered a large number of ISA awards and had the potential to bring about a major change in ICSID law. As of 2015, ICSID has administered 70 percent of all ISA arbitrations. The annulment of mmittee poor cess only applies to arbitrations of nducted under the ICSID Go ovention Rules and not under the Additional Facility Rules, so it does not reach all arbitrations administered by ICSID. Unfortunately, there was no support among the boost admembership of ICSID; the poop as all is currently domain, for the ICSID Go ovention to receive unanimous support in order for it to be implemented.

The creation of an appeals tribunal for all 3,200 BITs and FTAs is an utterly daunting task and would be impossible to achieve. The only way to achieve this would be to revive the Multilateral Agreement on Investment (MAI), which died for want of support in 1998. Another possibility, albeit much more limited, would be the creation of individual appeals processes for major new initiatives such as CETA, the TTIP or the TPP. A further possibility would be the submission of all ISA of mplaints to a single international of urt. The likelihood of being adopted is slight.

The establishment of a xed no stero of trusted arbitrators to be chosen to hear all ISA cases is so metimes proposed as a means of enhancing public trust in the ISA process. There are a number of obvious objections, including perceptions of bias against private investors, which make this approach unpalatable.

A further re nement we uld be a standing nestere f arbitraters to serve as judges in a general appeals precedure. This is also an interesting appreach but suffers from the difficulties of giving jurisdiction to a single appeals of urt discussed above.

In a nclusian, while a universal a urte f appeal is an idea that has much a mmend it, the practical and palitical difficulties in the waye f its creation may prove to be insuperable.

ISA allo s foreign companies to challenge normal domestic reg √ation

This is perhaps the central and most pervasive criticism that has emerged since the entry into force of NAFTA Chapter 11. Some critics consider that ISA claims constitute a challenge to the right of states to regulate and to make public policy choices. This sentiment has recently been voiced by German of cials

fails **b** meet the standard set by the treaty. A further **p** int that can be made that, at least in dem, cracies subject **b** the rule **c** f law, claims are made be **b** re **d** mestic **c** urts against all kinds **c** f public **p** licy every day **c** f the week. The same German minister **c** f industry who **c** bjects **b**. Vattenfall's arbitral claim as an attaint **b**. Theo bjecth n, therefore, must be against ISA as a process and not against the right to challenge public policy. Here it must be admitted that a ourt seems to enjoy a greater degree of legitimacy in the public eye. A good example is the case law of the CJEU on neerning the action in damages for serious violations of EU law by member states. It is not creating the action in damages against member states for serious breaches of EU law, the CJEU took care to balance the rights of the se suffering eound mich as against the interests of states as eound mic regulators, so mething that arbitrators have to uble articulating of penly, due to their limited mandate. But, in ounclusion, the mere fact of an action in damages based on the abuse of regulators powers is hardly a novelty in democratic societies.

ISA process ynd y restrains domestic reg yator options and threatens en ironmental, labo y and h yman rights standards: it leads to a 'reg yator chill'

The previous criticism frequently takes the form of the allegation that the existence of potential ISA claims acts as a "regulatory chill." This criticism was rst advanced in Canada by Howard Mann writing for the IISD¹¹³ and has subsequently been taken up by Gus van Harten in his books¹¹⁴ as well as Elizabeth May, leader of the Green Party of Canada,¹¹⁵ and labour unions.¹¹⁶ Similar criticism, in virtually the same terms, has been voiced in the debates of the European Parliament and by other European public interest groups since the transfer of competence over foreign direct investment to the European Union.¹¹⁷ In Japan, ISA in the TPP is seen as a threat to the integrity of Japanese agriculture. Similar sentiments have been strongly voiced by the legal community in Australia.¹¹⁸

Central to these concerns is the fear that public policies in favour of environmental protection, public health, employment in the public sector, agricultural production policies and human rights standards may be particularly subject to challenge. As a result of this potential challenge, it is alleged that governments and public servants will be reluctant to adopt new regulations in the public interest. Critics point to various challenges to environmental regulations under NAFTA

¹¹² See e.g. Francovich v Italy and Bonifaci and Others v Italy, Joined Cases C-6/90 and C-9/90, [1991] ECR I-5357, , online: <eur-lex.

perspective, are the actions currently pending against Spain, all wing form disputes arising out of the cancellation of so lar energy supply on ntracts. These cases are seen as evidence of the dangers of ISA on mmitments in the face of eoung mic difficulties and their out on me may weigh heavily in the on ming policy debate in the European Union.

The expectation regarding ISA claims against developed democracies originally suggested that these states would not be sued at all or would on meout the strong winners. The basic paradigm of ISA was created for the protection of for reign investments in developing of untries. This picture has grown more of many many reasonable in recent years, as more agreements provide for ISA between developed democracies.

ISA standards of protection are open to all kinds of ab si e interpretation

Another signi cant criticism of ISA focuses not on the procedure but on the substantive standards of protection set out in various investment treaties such as NAFTA Chapter 11. It is argued that these standards, such as national treatment, most favoured nation treatment, fair and equitable treatment, full protection and security, prohibition of certain "performance requirements" and the prohibition of expropriation without full and prompt compensation, are very dif cult to de ne and are thus subject to overly expansive interpretation. The result of this ambiguity is that it is feared that arbitrators can expand the de nitions inde nitely with a view to protecting private interests. In support of this argument, critics point to various decisions under NAFTA Chapter 11 and other treaties interpreting the fair and equitable treatment standard and suggest that it is subject to almost in nite expansion at the discretion of arbitrators. The result of the ambiguity of the substantive rules is that governments can never be sure that their laws and decisions will not be subject to challenge by foreign investors.

Finally, there is the fear that hedge funds or some law rms may seek out potential claims and offer to fund and manage them on a contingency basis, thus increasing the possibility that claims will be made.

A rst point that should be made is that arbitrators are bound by their mandate, the law and their professional ethics; they are not permitted to give way to personal prejudices. Furthermore, arbitrators are appointed to the panel to serve the interests of justice, not the interests of the party that no minates them. Any arbitrators who departs from this standard debases the whole process. It may happen, but in the main arbitrators serve with a high degree of professional and ethical conduct. The second point is that observers of ISA should not equate the claim with the nall award. Advancates make big claims, but are seldors awarded anything close to their claim when they succeed. There have been so me very large awards, but most awards cut the claims down drastically. Claims are made and based on the different standards set out in the BIT they are argued in as strong a manner as possible in the case. In the majority of cases, however, states prevail. Claims are frequently host on the facts, rather than on a forced expansion of the meaning of a standard of projection. Examples under NAFTA include P

T, t^{131} in which the claimant made by ad allegations of denial of fair and equitable treatment but received damages only for the abusive behaviour of Canadian civil servants in the conduct of the case. In a later case, A, C, G, t^{132} after extensive inquiry, the tribunal discovered that the claim was based on the fraudulent manipulation of company records. The awards in E t^{133} and t^{134} and t^{134}

It must be pointed out that a number of NAFTA claims have been abandoned or have not been pursued and will thus be deemed to be abandoned in time. 136 It is one thing to make a claim, in effect to try it on to r size; it is quite another to pursue it successfully. The more the arguments are to reed and implausible, the less likely they are to succeed. Another factor militating against frivologies their of st. ISA claims are complex matters and require a serious commitment of funds. Contingency

that the cush mary standard can evolve ver time and T0.6 to zen. 145 answer this, the CETA parties have chosen an even more restrictive andeatment.
State(d T0.6 have)0.6.6thu(d T0.6 sh wn)0.6.6that they e capable giving and direction. However, this d IIJ0.1 Tw

and virtually all BITs and trade agreements with investment chapters. NAFTA Chapter 11 innovated by covering acts "tantamount to" expropriation. Critics 153 view these provisions as hardening and giving credit to what is seen as an overly onerous and controversial international customary standard. They also consider that the concept of indirect expropriation is far too vague and that its use opens the door to abusive and even frivolous attacks on legitimate domestic regulation. Such claims have been made without success under NAFTA but with greater success in litigation under some other BITs and trade agreements. 154

A rst pp int b be made is that restrictions on discriminatory and und mpensated exprepriations have been theoretic focus many international law. Arguably most BITs do not innovate with respect to the general international prohibition on discriminatory and und mpensated exprepriation. What they do is provide an international remedy in arbitration. The essential question is thus whether ISA do notitutes a better remedy than nineteenth-century gunboats and espousal of claims by states. Critics respond that do mestic dourts should be left to determine the legality of exprepriation under the law of each state. Here the best is clearly the enemy of the good. Experience over centuries has shown that there are too many situations in which a government decides to act unilaterally and for a variety of reasons does not feel dompelled or able to offer prompt and adequate dompensation. Customary international law has developed over the years to deal with a genuine problem. BITs only add a new legal remedy; they do not create new law. In this area, as in all of the debate over ISA, there are two interests: those of states and those of to reign investors. Developed democratic states themselves are often to red between two imperatives: they do not like being sued, but they wish to ensure that their citizens investing about ad enjoy suitable protection from unfair treatment.

In a nearea, international investment law may well have a ntributed to the emergence of new law on exponential in in that it has helped to to ster the emergence of a doctrine of indirect exponential in. 155

The chosest analogy in domestic law (and a clear source of inspiration) is the doctrine of regulatory takings in US a notitutional law. 156

The connect of indirect exponential in captures the reality of situations in which the value of a foreign investment is entirely nullified by new laws, regulations or decisions (or the failure to take necessary decisions) that make it impossible to proceed with the investment once begun. Capital is sunk and then the benefits cannot be realized. Such situations may arise out of a nitused and dysfunctional decision making, as well as more overt discrimination or the emergence of new regulatory regimes that have unforcesent a nequences. Charges of indirect exponential in often raise acute questions of public policy and may be met with the defence form the state that it was dealing with a situation of necess 7 Twiti 7ed by ntal-hwip(.y)11192.1 (.) 36.8 (arbitrators to say be apelleuption

with ut ISA. The studies do no by the WTO do not seem to be a nclusive, 164 and so me recent OECD studies tend to suggest that they may make a marginal difference. 165 The eq. no mic case for ISA between developed democracies is even harder to make. Vast investments have been made between developed democracies without ever instituting BITs in general or ISA in particular. If developed democracies do not institute full ISA between themselves, little is likely to change in the existing pattern of for reign investment between them: trade agreements enhancing access and regulatory one peration will do much more than ISA to promote trade and investment to wish. The utility of ISA between developed democracies can only be argued as a marginally useful phenomenon and for other political and legal reasons.

ISA ma be a reasonable option in certain de eloped co intries b it is not appropriate bet een de eloped democracies

A nal argument, heard from time to time, is more selective. It is that while ISA may be useful in relations between developed, capital-exporting and developing, capital-importing states, it has no place in the economic relations between developed democracies. The move toward ISA in NAFTA was taken and the further drift in this direction has been a serious policy mistake. This is a position that appeared to have been adopted by the Government of Australia for some years but now seems to have been abandoned.

It should be admitted that ISA is not the primary go all between developed democracies: market access here goods, services and investments is far more significant and bjective than securing ISA between them. This being said, there are definitely situated as arising in developed democracies where a law or administrative decisions can be adopted against which there are no remedies, as happened in the Newhoundland Bowater expropriation. Certain policies, such as the US Buy American rules, can be impossible to challenge before domestic courts. Parliamentary supremacy in the United Kingdom, Canada, Australia, New Zealand, and even in the United States, can provide cover for the adoption of laws against which there is no adequate domestic remedy. This is perhaps less true for EU law and Germany but even Germany has exceptions in which foreign investors would have thouble challenging a domestic law violating the standards of a BIT. This seems to be true for most EU member states. The st-communist countries of the European Union continue to have problems, either with new laws such as those curtailing the interest rates on more regages demonstration for reign currency, or administration of laws for domestic political purposes, as in the Czech Republic. The administration of justice is not the ught to be of the highest standard in Bulgaria and Romania. The extent that this can still happen, causing problems for herigin investors, recourse to ISA is arguably justified.

The mere fact that g_1 vernmental p_2 licies are challenged in ISA is surely g_2 it iself g_2 to reject it; g_2 vernments may g_2 to like g_2 have their g_2 licies challenged under ISA but this happens in g_2 mestic administrative law and g_2 notitutional law and EU law g_2 ceedings every day g_2 of the week and they live

with it. Is there really a difference due **b** the requurse **b** arbitration instead **c f a** urts? Many US FTAs **p** sit that they **d n t** grant rights exceeding these available under **d** mestic law. ¹⁶⁹ **S b** ng as this is generally true, and **s b** ng as arbitration is accepted as a genuine alternative **b a** urts, is there really a tenable argument in principle?

There is a further major argument advanced in support of reacurse to ISA between developed democracies: what would result if all developed democracies decided to to lib. w Australia? Can there be one law for a few and another for most states? How would China respond to being designated as risky while Norway is not? Would this not destroy the whole edice of BITs? Some might welcome this result, on utmm IJO.OTc the FFOTw The whole hongement gpmna result, on (ecight welcom. Sinar has urc.) IJO w The

It should be noted that the Canadian and US model BITs, for some time, as well as several recently • ncluded RTAs• f the European Union, on the references to the creation of an appellate of urt at some $p_{\underline{n}}$ int in the future, but $p_{\underline{n}}$ on ncrete steps have been taken. Set yp a Single ISA Co yrt

One step **b** ward a genuine appellate **pn** cess that may be **o** ntemplated is the amendment **o** f the ICSID **G** nvention **b** change the existing ad **b** c annulment **o** mmittee **pn** cess into an appeal **o** r reference **pn** cess. This **o** uld **o** nly be **d** ne by treaty amendment. The ICSID Secretariat **o** ated this idea in 2004-2005. The runately, there was virtually **n** support among ICSID parties and the idea was **d** n pped. Perhaps it is time **b** revive the idea, as it is the surest way **b** ward adding an appellate **o** r reference **pn** cess that **w** uld apply **b** a signicant **pn p** rtion **o** f all ISA cases. It cannot be said as yet that there is a **gn** undswell **o** f support but amendment **o** f the ICSID **G** nvention has the **p** tential **b pn** vide an appeals **pn** cess **b** r a very large number **o** f ISA awards.

Establish a Standing, Closed Roster of Arbitrators

It is sometimes argued that if states came together to name a small roster of highly quali ed arbitrators from whose number all ISA arbitrators would be chosen, there would be much greater public condence in the decisions rendered by panels of these arbitrators, rather than awards by individually selected arbitrators.

Arbitrators for the ICSID ad hoc committee are chosen from a relatively small group of very experienced and respected arbitrators and it has been suggested by some commentators that an appeals process might be founded on a roster of arbitrators rather than an appeals court. This proposal suffers from all the same dif culties as the creation of a standing appeals tribunal.

The oncepton f a standing, chosed no steron f arbitrators is also suggested as a partial answer to the question of public on no dence in the ISA process. It is suggested that public on no dence would be raised if all ISA arbitrations were decided by arbitrators chosen in advance by states from a monograph arbitrator rs who on uld be trusted to understand the signic canceon f their mandate to rule on both private and public interests. Like many of the suggestions from critics of the ISA system, this proposal is one

 		_

applied to protect legitimate public welfare objectives, such as health, safety and the environment, do not constitute indirect expropriations.

Finally, several provisions codify the various principles of transparent and open proceedings that they both defend within their own judicial systems and internationally.¹⁹⁴

The net effect of these provisions, some entirely new, others expanding on NAFTA provisions or taken from model BITs, is to provide extensive protection, if not sometimes total exemption, of a range of regulatory measures and policies. It must be noted that some of these exemptions and interpretations rely on provisions outside the investment chapter.

Subject to the interpretative pitfalls alluded to above, the decision to expand the scope of explicit exemptions and clarications is understandable. In the face of the NAFTA case experience, and in the face of public criticism of the ISA process, this approach constitutes the most effective response readily available to both parties.

In resp. nse to these criticisms, it may be said that the exemptions and exceptions are so pervasive and complex that one must ask whether there is a risk that they may be self-defeating. The early BITs were not more than 10 pages in length, of ten shorter. The Canadian FIPA, on which this is more delled, is 45 pages in length. CETA Chapter 10 has 38 pages and is supplemented by provisions elsewhere in the text. The parties have go ne far to ward exhaustively provided their right to regulate in the public interest by defining, exempting of right to reduce the exercise of these provers. But have they go ne to far? Like the enthusiastic common near law draftsman seeking to over every eventuality, they may well have created and verify complex text that may pose as many problems of interpretation as it so lives. It is impossible to envisage every eventuality and with a very complex text there may be a danger that general principles may be best in the details and arbitrators may be tempted to assume that what was not explicitly covered is not subject to the disciplines of the agreement.

Gi e States More Po er to Control ISA Proced yes, Eliminate Bad Cases and Interpret Meaning of Vag ye Standards

A further development in response to criticisms of ISA has been to expand the controls that states exercise over the process. This approach is re-ected in the Canadian and US model BITs and even more fully in the current text of CETA as well as the EU-Singapore FTA. The CETA text allows the parties to eliminate frivolous claims¹⁹⁵ at the very inception of a claim, as well as allowing the parties to put an end to claims that have no merit.¹⁹⁶ Several provisions allow the parties to consult and to issue binding interpretations of the text. In this way, the European Union and Canada expect to be able to ensure that the thrust of claims and the interpretations of arbitrators remain faithful to the text.

These pn visions have not been without on the versy and private interest gn ups have already begun to express the fear that states may intervene during the on nductor f pn ceedings to limit the meaning of a particular standard or even to act in a manner tantame unt to amending the treaty. 197

Abolish the ISA S stem or E empt De eloped Democracies from ISA

Australia, at one point in the recent past, appeared to be adopting a general position hostile to any recourse to ISA in any of its BITs. Some critics of the system suggest that the best approach to the problem would be to exempt at least all developed democracies from recourse to ISA. On the assumption that ISA is contrary to democratic principle and that the mistreatment of foreign investors should be dealt with exclusively by domestic courts under domestic law, it is argued that the only proper solution for developed democracies is, as a minimum, to withdraw from ISA

be envisaged if developed democracies were willing to pay the price. Bilateral of mmitments to ISA between developed democracies are not yet numerous, if one assumes that the European Gommission will succeed in its quest to have EU member states abandon their 190 BITs with each of their, inherited from days before the adhesion of Eastern European states to the European Union. Canada is planning to abandon its BITs with several EU states when CETA enters into force. But the problem of RTAs and the Energy Charter is much more serious. ISA provisions in the Energy Charter have been used more than any of their ISA procedure. They have been used only twice against Germany but have been into ked against several of their EU member states and by EU member states. This is not a treaty that the European Union can safely of mpromise.

Further @ mplicating the situation is the fact that ISA is part of the CETA and EU-Singapore trade agreements. We uld Canada agree to withdraw the ISA provisions from CETA at the last minute? Is Singapore a developed democracy in the eyes of the European Union and, if it is, how would Singapore regrespond to the idea of eliminating its ISA protected sta720061006C is, how would car Tw Treur)18 to pean UI Evainst
